// PROFILE

Full-stack developer with **2+ years of experience**, comfortable across frontend/mobile and backend. I build products that solve real problems: from a mining traceability system with **50+ users** and physical peripheral integration, to operational and payment platforms in production. Co-founder of **ChronoSoft**. Clean code, good UX, measurable impact.

// EXPERIENCE

Full-Stack Developer · Sun Valley Investments

JUN 2025 — PRESENT

\$ Flutter · NestJS · PostgreSQL · Azure · WebSockets · IoT/peripherals

- ▶ Built **AURUM** end-to-end (frontend + backend): mining traceability platform used by **50+ users** and growing, with full visibility into gold processing operations.
- ▶ Integrated physical peripherals — thermal printers, truck scales, and mining elevators — to capture operational data in real time.
- ▶ Automated purchasing and mining titling workflows, saving **2h/day for 10+ people** across departments.
- ▶ Implemented RBAC authentication and real-time bidirectional communication via WebSockets between hardware and backend.

Full-Stack Developer · Coins Tech Colombia

APR 2024 — JUN 2025

\$ Next.js · React · NestJS · LoopBack · PostgreSQL · AWS · Wompi

- ▶ Built a parking management platform now in production, processing **100–200 daily transactions** in constant use.
- ▶ Led a design system for operational and admin applications, improving consistency across **10+ interfaces**.
- ▶ Integrated Wompi payments for real-time parking transactions.
- ▶ Optimized rendering and assets reducing load times; backend with LoopBack and NestJS deployed on AWS.

// FEATURED PROJECT

Co-founder · ChronoSoft

FOUNDER

Software startup for parking management and point-of-sale systems. I lead the team: product architecture, technical decisions, and delivery.
